Usage fee

The usage fees are monthly license fees (simple usage license). These each refer to their own system access to the GISCAME software via the Internet. **The basic license** includes one user account, which can also be shared by several people. However, individual processing of the data, including protection against access by the other users of the same login, is not possible.

For **each additional user** with the personal processing of own projects the monthly fees listed in the second column.

The discounted "training" licenses for basic licenses and an unlimited number of user accesses per system access and 30 simultaneous users (module visualization: 10 simultaneous users) are for universities and colleges. The usage license price "Training" includes both the basic provision and the fee for all users of the respective system access.

The license to use includes the provision of the system on a server accessible via secured access, all updates, the maintenance and care of the software, a hotline by mail, the setup of user access and data backup.

Minimum duration

The minimum term is 12 months. Subsequently, the usage contract can be terminated monthly.

Training

- 3 days: the basics, application, modules / focus area
- 2 days: the basics, application
- 1 day: the basics
- Task-related trainings (upon request)

Project work

A project work can comprise various work steps, such as

- Literature review
- Development of an assessment matrix
- Adaptation of land use data
- Geodata preparation (geo-referencing, formatting)
- Geodata-analysis (e.g. determination of factors for the water erosion add-on)
- Development of landscape change scenarios
- Simulation of land use change
- Interpretation of the results

Extent and content of project work and hence the pricing are individually adjusted.

Report

The interpretation of simulation results of a project might happen in the form of a report which can comprise the following contents:

- Introduction
- Description of the methods
- Presentation of results
- Interpretation and discussion of the results
- Concluding deduction of recommendations for action

Setup

- Onetime setup: starting from 1.000 €
- Implementation of spatial data (land use data, attribute layers)
- Implementation of the land use definition
- Implementation of the assessment matrix
